```
Gaumma-lactamase; enantiomer; bicyclic lactam; temperature stable;
2-azabicyclo(2.2.1)hept-5-en-3-one; therapeutic agent; antiviral;
cardiac vasodilator.
                                                                                                                                                                                                                                                              Lactamase enzyme specifically hydrolysing (+)-enantiomer of 2-
azaiblicyclo(2.2.1)hept-5-en-i-one - isolated from Comamonas
acidivorans or prepared by recombinant DNA technology, used as,
cardiac vasodilator

    C. acidivorans gamma-lactamase pretein.

                                                                                                                                                                                                                                                                                                              Claim 5; Page 17-20; 28pp; English.

This sequence represents a gamma-lactamase capable of hydrolysing an enantioner of the bicyclic lactam 2-azabicyclo(2.2.1)hept-5-en-3-one. This enarghe has at least 1 of the following features; greater than 8% retention of activity after incubating at 40 deg. C for 4 hours, or >30% activity after incubating at 60 deg. C for 4 hours, hydrolysis at an initial concentration of 10° g racemic lactam plus 30° ml buffer and proceeding to a least 90 (especially at least 90% hydrolysis of the (+) lactam with 65% hydrolysis of the (+) lactam with 65% hydrolysis of the (-) lactam. The enzyme is much more temperature-stable than previously identified (-)-gamma-lactamases used for the same purpose. It also enables the bloresolution to be exercised out at very high substrate/product concentrations. This enzyme has applications as a therapeutic agent e.g. as an antiviral agent or as a cardiac vasodilator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        44 PYDNPQVHNRWHPDIPMAVWVEPGAEFKLETYDWTGGAIKNDDSAEDVRDVDLSTVHFL-

ANW40264-W40275 are portide fraqments of an R-specific amidohydrolase solated from Klabsielia oxytoca strain PRS1. This enzyme allows the microarganism to utilise 3,3,3-trifluoro-2-hydroxy-2-methyi propionamide as its sole nitrogen source. This amidohydrolase is used in a process for preparing (R)-isoforms of 3,3,3-trilluoro-2-hydroxy-2-methyl propionamide which is cheaper than prior art optical resolution of the racemate using dimethoxy strychnine or (S)-(-)- alpha
                                                                                                                                                                                                                                                                                   ABB93277 standard; Protein; 307

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to identifying target proteins. (ABB$90790-ABB$4016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using statable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant

This emixpro allows the microorganism to utilise 3.3.3-trifluoro-2-hydroxy-2-methyl propionamide as its sole nitrogen source. This amidohydrolase is used in a propess for preparing (R) isologram of 3.3.3-trifluoro-2-hydroxy-2-methyl propionamide which is cheaper than prior art optical resolution of the racemate using dimethoxy strychine or (S)-(-)-alpha

The present invention relates to the genome sequence of Listeria monocytogenes EGD-c (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and related organisms. The present invention. Protein enroided by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for bicsynthesis and biodegradation, especially biosynthesis of vitamin E.2. The genome sequence are expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and woodcines on proteins encoded by it are useful in pharmaceutical and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and modulate L. monocytogenes-related diseases. In addition, the genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    eal L. hypothetical protein TW0119 - Thermotoga maritims (strain MSB8)
C; Pecies: Thermotoga maritims (517516)
C; Pecies: Thermotoga maritims (527616)
C; Pecies: The Colayton R.A.; Gill, S.R.; Gwinn, M.L.; Dodson, R.J.; Haft, D.B.; Bickey Garrett, M.W.; Stewart, A.M.; Cotton, M.D.; Pratt, M.S.; Phillips, C.A.; Richardson, D.;
C, M.
Nature 199, 123-129, 1999
A; Title: Fvidence for lateral gene transfer between Archaea and Bacteria from genome seq.
A; Accession: G7244
A; Status: preliminary
A; Accession: G7244
A; Status: preliminary
A; Accession: G7244
A; Status: Deliminary
A; Cross-references: GB: ARN
A; Residues: 1-285 cARN
A; Residues: 1-285 cARN
A; Cross-references: GB: ARN
A; Cross-references: GB: ARN
A; Gene: TW0119
submitted to the EMBL Data Library, July 1999
Alpescription: Pyrococcus abyssi genome sequence: insights into archaeal chromosome struck feference cumber: A75001
Alkeference cumber: A75001
Alkession: E75139
Alstatus: preliminary
Almolecule type: DNA
Alkesidues: 1-298 < KAW>
Alkesidues: 1-298 < K

UVA is an ATPase and a DNA-binding protein that preferentially binds single-stranded or UV-irradiated double-stranded DNA (By similarity).
-!- SUBMUII: Consists of three subunits; uvra, uvrB and uvrC.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. UVRA SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

R. Schone 287:1809-1815(2003).

Catalyzes the excision reaction of UV-damaged nucleotide segments producing oligomers having the modified base(S). Uvra is an Arpase producing oligomers having the modified base(S). Uvra is an Arpase cand a DNA-binding protein that preferentially binds single-stranded or UV-iradiated double-stranded DNA (By similarity).

C. SCHOLT: Consists of three subunits: uvra, uvrB and uvrc.

SCHOLT: Consists of three subunits: uvra, uvrB and uvrc.

C. SCHOLT: Consists of three subunits: uvra, uvrB and uvrc.

C. SCHOLT: SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    this SWISS-PROT entry is copyright. CATALYTIC ACTUVITY: NADPH + nitrate - NADP(+) + nitrite + H(2)O.

COPACION: REQUIRES FAD, A HEME GROUP (CALLED CYTOCHROME B-557)

AND ONE MOLYBERNUM ATON.

SUBGUIT: HOMODIMER (BY SIMILARITY).

                                                                                                              SUBCELLULAR LOCATION: Innor membrane-associated,
PTM: An intermediate of this reaction is the autophosphorylated
ppk in which a phosphate is covalently linked to histidine
residues through a NP phond.
SIMILARITY: BELONGS TO THE POLYPHOSPHATE KINASE FAMILY.
SIMILARITY: CONTAINS I PLD PHOSPHODIESTERASE DOMAIN.

Submitted (JUN-1996) to the EMBL/GenBark/DDBL databases.

Submitted (JUN-1996) to the EMBL/GenBark/DDBL databases.

SIGNIFICAN BAY BE INVOIVED IN TISSUE INJURY AND REMODELING. HAS SIGNIFICANT ELASTOLYTIC ACTIVITY (BY SIMILARITY).

CATALYTIC ACTIVITY: Hydrolysis of soluble and insoluble elastin.

Specific cleavages are also produced at 14-Ala-!-Lou-15 and 16-TI-!-Lou-17 in the B chain of insulin.

CCHACTOR: REQUIRES CALCIUM AND ZINC FOR ACTIVITY (BY SIMILARITY).

SIMILARITY: CONTAINS I HEMOPEXIN-LIKE DOMAIN.
